Consumer Confidence Survey

Second Quarter Report 2012

1. Survey Objective and Method

The Public Governance Programme of Lingnan University was commissioned by the Bauhinia Foundation Research Centre to conduct the Consumer Confidence Survey (hereafter, the Survey). The key objective of the Survey is to assess consumer confidence in Hong Kong.

The Survey is a telephone interview survey. Data collection of the Survey took place between June 4 and June 10, 2012. The target respondents are Hong Kong permanent residents aged 18 or above.

To ensure the representativeness of the data, a sample of telephone numbers was randomly selected from Hong Kong Telephone Directory. The last two digits of the telephone numbers were replaced by two random numbers. Eligible samples within households were input and the computer would randomly draw one of the eligible samples to be our respondents.

A total of 1,026 respondents were successfully interviewed. The response rate is 32.2%. The margins of error are estimated to be $\pm 3.1\%$ at 95% confidence level.

The Survey is the thirteenth one of a series of quarterly survey exercises, with the first survey completed in June 2009, followed by surveys conducted every three months. The Survey consists of two parts. Questions in Part One ask respondents about their perceptions of Hong Kong's overall economic conditions, Hong Kong's employment situations and respondents' household incomes currently, in next three months and in next twelve months. Questions in Part Two ask respondents about their various economic and consumption behaviours.

Every question has a “favourable” answer (e.g. economic conditions have been improved, no household members are unemployed) and an “unfavourable” answer (e.g. economic conditions have been worsened, some household members are unemployed). From the data of this survey, the **index scores** of each of the questions in the survey period (June 2012) can be calculated.¹

The **Bauhinia Hong Kong Consumer Confidence Index** is calculated from the index scores of all the questions asking respondents about their economic expectations and economic behaviours in the short term future (next three months).² It shows the consumers’ confidence over economic expectations and economic behaviours in the short term future.

The **Bauhinia Hong Kong Consumer Expectations Index** is calculated from the index scores of the three questions asking respondents about their medium term future economic expectations (perceptions of Hong Kong’s overall economic conditions, Hong Kong’s employment situations and respondents’ household incomes).³ It shows the consumers’ expectations of economic conditions in the medium term future.

The change in the index score of a question indicates the change in the consumers’ confidence or economic conditions as represented by the question. The index scores in the base period (June 2009) are set to be 100.0, and the index scores in this survey are compared with those in the base period (June 2009 = 100.0). In general, an increase in the index score indicates an improvement of the consumers’ confidence or economic conditions, and a decrease in the index score indicates a worsening of the consumers’ confidence or economic conditions, as represented by that index score.

¹ We subtract the percentage of respondents who chose the “unfavourable” answer from the percentage of respondents who chose the “favourable” answer, and then add 100 to the difference, to obtain the relative score of the question. The relative score takes a value between 0 and 200. When it exceeds 100, that means more respondents chose the “favourable” answer than those choosing the “unfavourable” one; when it is smaller than 100, that means more respondents chose the “unfavourable” answer than those choosing the “favourable” one. The index score of the question is the ratio of the relative score of this question to that in the base period (June 2009).

² The Bauhinia Hong Kong Consumer Confidence Index is calculated by taking the arithmetic mean of the index scores of all the questions relating to the short term future.

³ The Bauhinia Hong Kong Consumer Expectations Index is calculated by taking the arithmetic mean of the index scores of the three questions relating to the medium term future economic expectations (perceptions of Hong Kong’s overall economic conditions, Hong Kong’s employment situations and respondents’ household incomes).

2. Findings

2.1 Index scores of different questions

The following table shows the index scores for the present/past three months, next three months and next twelve months of different questions (June 2009 = 100.0):

		2009. 09	2009. 12	2010. 03	2010. 06	2010. 09	2010. 12	2011. 03	2011. 06	2011. 09	2011. 12	2012. 03	2012. 06
Hong Kong's overall economic conditions	Present	151.1	163.5	168.5	124.3	155.6	144.3	129.6	122.2	67.9	74.2	99.1	66.8

For data details, please refer to Statistical Tables 1 to 9 in the Appendix.

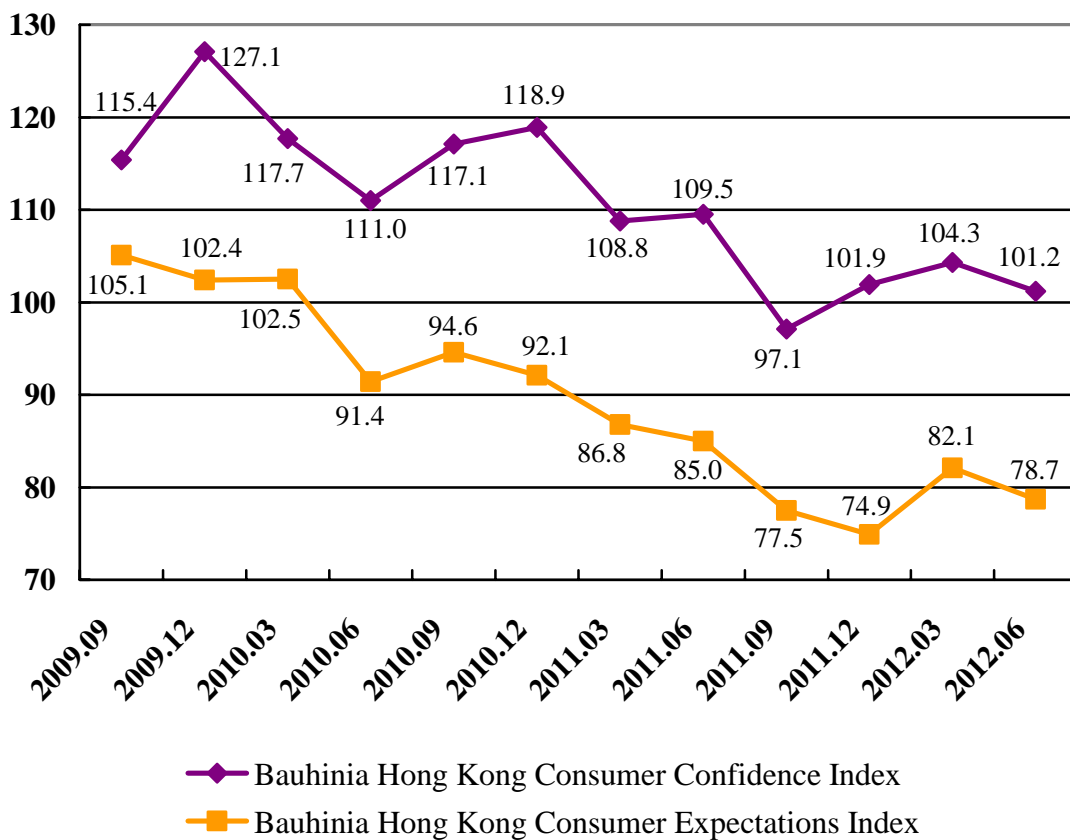

2.2 Bauhinia Hong Kong Consumer Confidence Index

After calculation, the **Bauhinia Hong Kong Consumer Confidence Index for the survey period (June 2012) is 101.2** (June 2009 = 100.0).

2.3 Bauhinia Hong Kong Consumer Expectations Index

After calculation, the **Bauhinia Hong Kong Consumer Expectations Index for the survey period (June 2012) is 78.7** (June 2009 = 100.0).

The values of the Bauhinia Hong Kong Consumer Confidence Index and the Bauhinia Hong Kong Consumer Expectations Index over different survey periods are shown in the following chart:

2.4 In view of paragraphs 2.1 to 2.3, the following observations can be obtained:

- The Bauhinia Hong Kong Consumer Confidence Index is 101.2 (June 2009 = 100.0), slightly lower than the index value of 104.3 in the previous survey (March 2012). It indicates that consumers' confidence over economic expectations and economic behaviours in the short term future (next three months) has deteriorated slightly *vis-à-vis* the previous survey three months ago.
- The Bauhinia Hong Kong Consumer Expectations Index is 78.7 (June 2009 = 100.0), slightly lower than the index value of 82.1 in the previous survey (March 2012). It indicates that consumers' expectations of economic conditions in the medium term future (next twelve months) have deteriorated slightly *vis-à-vis* the previous survey three months ago.
- Respondents' current perceptions of Hong Kong's overall economic conditions and their expectations in next three months have worsened very significantly and their expectations in next twelve months have worsened, *vis-à-vis* the previous survey three months ago.
- Respondents' current perceptions of Hong Kong's employment situations have slightly improved *vis-à-vis* the previous survey three months ago. Their expectations of Hong Kong's employment situations in next three months have significantly worsened, and their expectations in next twelve months have worsened, *vis-à-vis* the previous survey three months ago.
- Regarding respondents' household incomes, respondents' current situation and their expectations in next three months have slightly worsened, and their expectations in next twelve months have been at par, *vis-à-vis* the previous survey three months ago.
- The employment situation of respondents' family members over the past three months have been at par, and their expectations in next three months have improved slightly, *vis-à-vis* the previous survey three months ago.

- Property purchase by respondents' families over the past three months has improved, but respondents' expectations in next three months regarding property purchase by their families have worsened significantly, *vis-à-vis* the previous survey three months ago.
- The situation of respondents' expenses on daily necessities over the past three months has been at par, and respondents' expectations in next three months have slightly improved, *vis-à-vis* the previous survey three months ago.
- The situation of respondents' expenses on non-recurrent large purchases over the past three months have slightly improved, and respondents' expectations in next three months have improved, *vis-à-vis* the previous survey three months ago.
- The situation of respondents' investment in financial products over the past three months has worsened significantly, and their expectations of investment in financial products in next three months have improved, *vis-à-vis* the previous survey three months ago.

3. Statistical Tables

1. Do you think the overall economic conditions of Hong Kong have improved or worsened over the past 3 months?
Do you think the overall economic conditions of Hong Kong will improve or worsen in next 3 months?
Do you think the overall economic conditions of Hong Kong will improve or worsen in next 12 months?

	Present		Next 3 months		Next 12 months	
	N	%	N	%	N	%
Improve	113	11.0	149	14.5	217	21.2
No change	210	20.5	192	18.7	118	11.5
Worsen	608	59.3	483	47.1	369	36.0
